

Steam Pumps Pulled by Horses were used by fire departments from the mid-1800's to the early 1900's. At the time, they were a major improvement over the hand pumps formerly used.

The "Roosevelt," the last horse-drawn steam fire engine which served Salt Lake City until 1919, will be on display Monday at North Park in Provo. The public is welcome.

1902 'Roosevelt' coming to Provo

Herald 27 June 1996

Fitting in with both Provo's Freedom Festival and Utah's Centennial, the Daughters of the Utah Pioneers will be offering a glimpse of history July 1 at North Park, 500 W. 500 North in Provo.

The "Roosevelt," a 1902 steam fire engine which was purchased by Salt Lake City and housed in Station 1, will be on display at the Utah Pioneers Museum for the Monday event.

The Roosevelt was the last horse-drawn engine which served Salt Lake City until 1919, but time, weather and vandalism took its toll.

The DUP organization acquired the engine in 1972. Since 1994, the Roosevelt has undergone a complete restoration.

The engine is touring many cities in Utah to celebrate the Centennial.

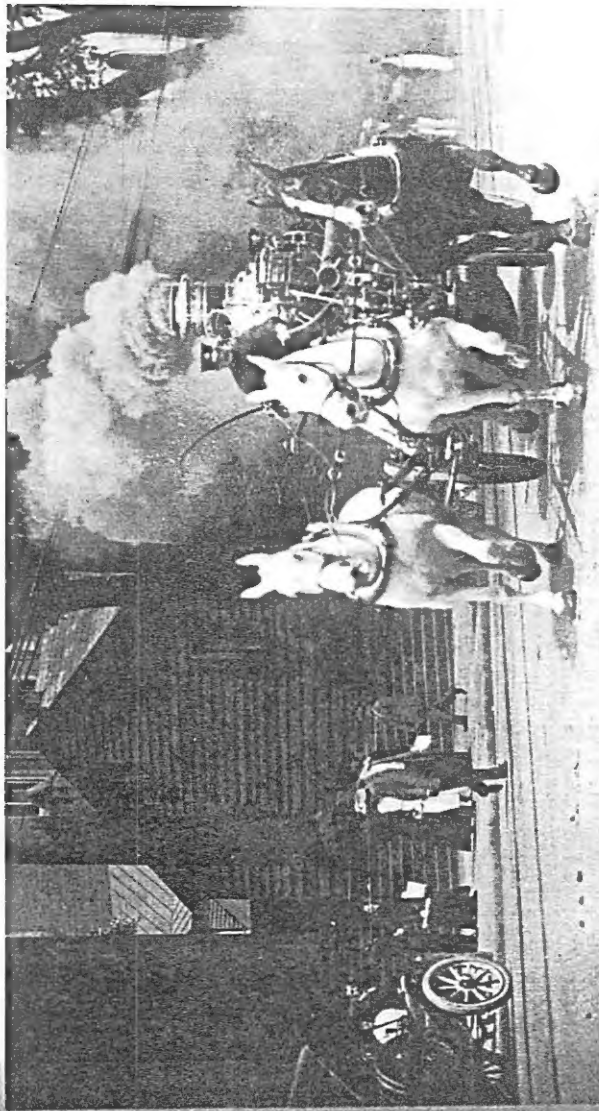

Provo fire engine No. 1, newly restored by Jack Hopkinson, will also be on display.

The event will get under way at 8 a.m. with a flag-raising ceremony. Also beginning at 8 a.m., the Sons of the Utah Pioneers will be serving a pancake breakfast.

They will serve hot dogs and drinks at lunch time.

There will also be balloons, baked goods, games, drinks, snow cones, crafts, other attractions and the SUP will shoot off cannons.

Sharpe Photography will be on hand to take pictures of individuals or families with the fire engines. The cost will be \$7.
